

## NFC Page

- Send Button: generate NFC stream again
- Send via Text: send thru text, a popup asks users to input phone number where they want to transfer to would show up after the button is clicked. The text will include: 1. URL of user's profile; 2. URL of our app's download page
- Share: share thru other apps, such as Email (URLs + QR), Facebook (QR), etc.

## Intro Page

- Take Me to Setup Now: goes to the Edit My Profile page when clicked
- Setup later: skip this and starts the app right away

## New My Profile Page

- Similar to friends' page, only added the two buttons. I placed them at the top in case user devices' screens are not large enough and users may need to scroll down.
